

## Requirements

To work on KL resources via Pulse Secure you need a KL user and appropriate rights.. In addition, the user needs a TOTP app on a smartphone such as Google Authenticator:

IOS: <https://apps.apple.com/de/app/google-authenticator/id388497605>

Android:

<https://play.google.com/store/apps/details?id=com.google.android.apps.authenticator2&hl=de>

If more then one person is using that access you need more users(you can request that over your contact person) or you have to setup a multi user TOTP management. One example for that would be Keepass with KeeTrayTOTP plugin([GitHub - KeeTrayTOTP/KeeTrayTOTP: Tray TOTP Plugin for KeePass2.](#))

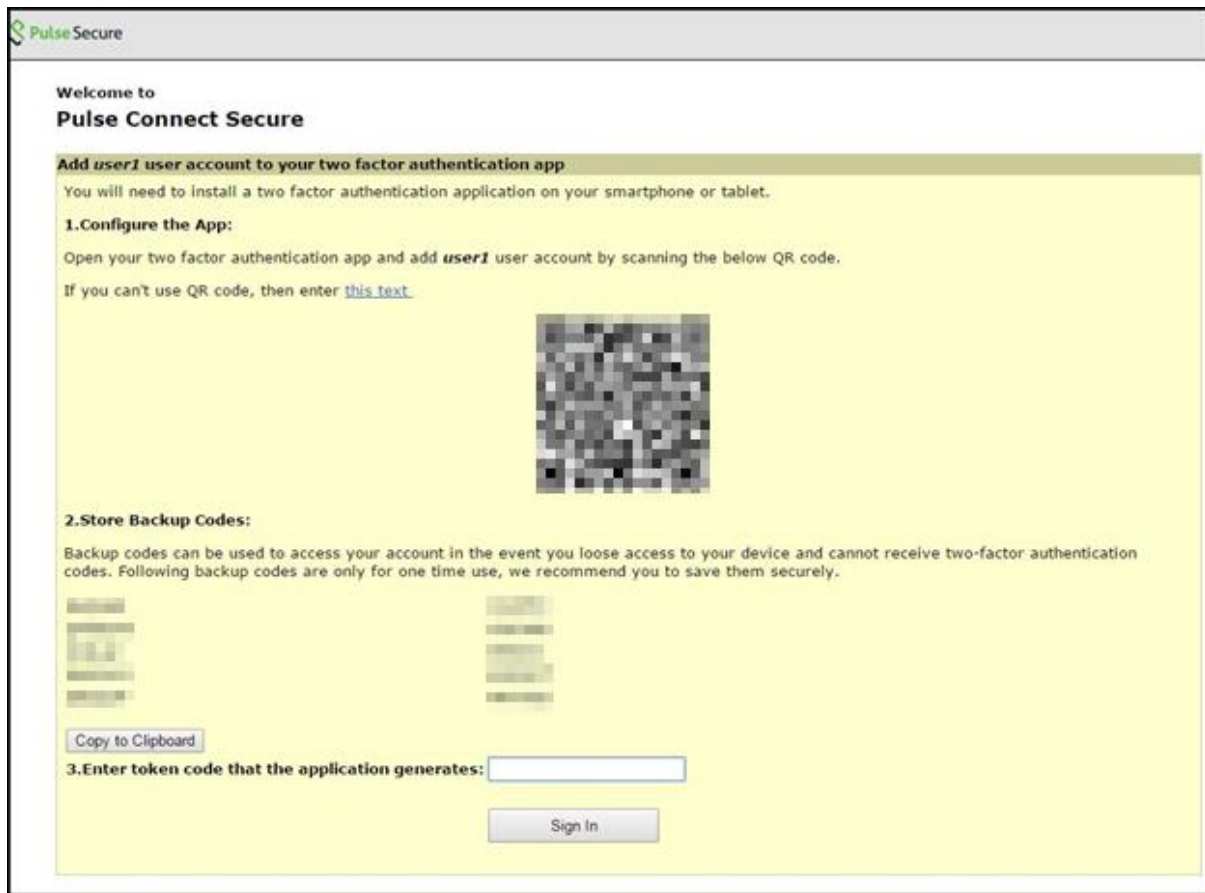

For access, an Internet connection and a HTML5-capable browser (Chrome, Firefox, Edge, IE11 ...) is required. You also need to know the computer name of your device (PC, notebook, workstation).

## Installation and use

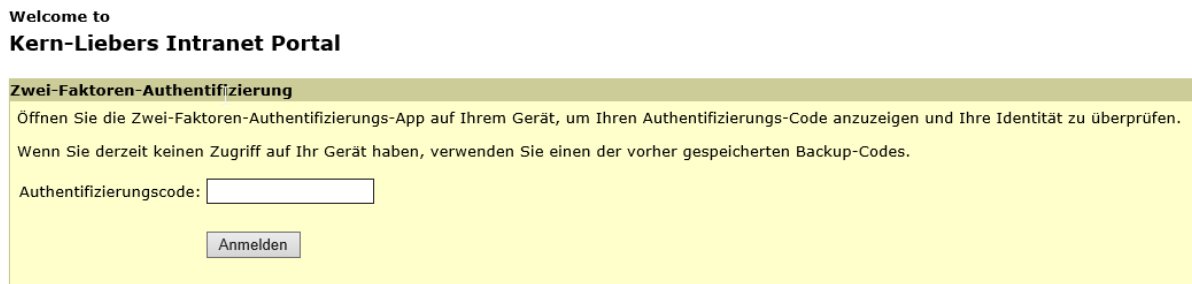

To set up access, the URL <https://external.kern-liebers.de/> must be called up. Here you log in with the Windows login data. After that the setup of TOTP is done.

### Do you need help?

Contact our service desk at +49 (0) 7422 511 600 or by e-mail ([sd@kern-liebers.de](mailto:sd@kern-liebers.de)).

Here the barcode must be scanned with the installed app. Afterwards you can login with the generated password. If TOTP is set up, the password query looks like this.

After TOTP is configured you should be able to access your ressources.
