A strong team celebrates a milestone

Appreciation, team spirit and trust – these are values that define a strong team and keep it together.

Every company history is rooted in the commitment and skills of each member of staff. We are proud of our entire team and would like to thank each employee for writing this chapter in the history of MEDER with us and for keeping the company on course towards a successful future.

60 years of MEDER called for a celebration – and the Cannstatter Volksfest was the perfect opportunity! The entire team at the company travelled to Stuttgart to toast our anniversary.

Many thanks!

Thank you

for 60 years of trust in our team and our products!

Member of the KERN-LIEBERS Group

1954

Founding

Kurt Meder produced his first springs in his parents' house.

60

Anniversary

The team at MEDER produces more than ten million springs every day.

1959

Schwenningen site

In 1959, the first factory building was constructed and occupied at the present location.

1992

Globalisation

Expansion of sales markets with local production, focusing on Europe, Asia and NAFTA countries.

1969

A MEDER moon landing

Springs made by MEDER were in cameras on board the Apollo 11 for the moon landing.

2002

Growth and development

Significant building expansion made possible by sustained growth and the 2002 merger with the KERN-LIEBERS Group.

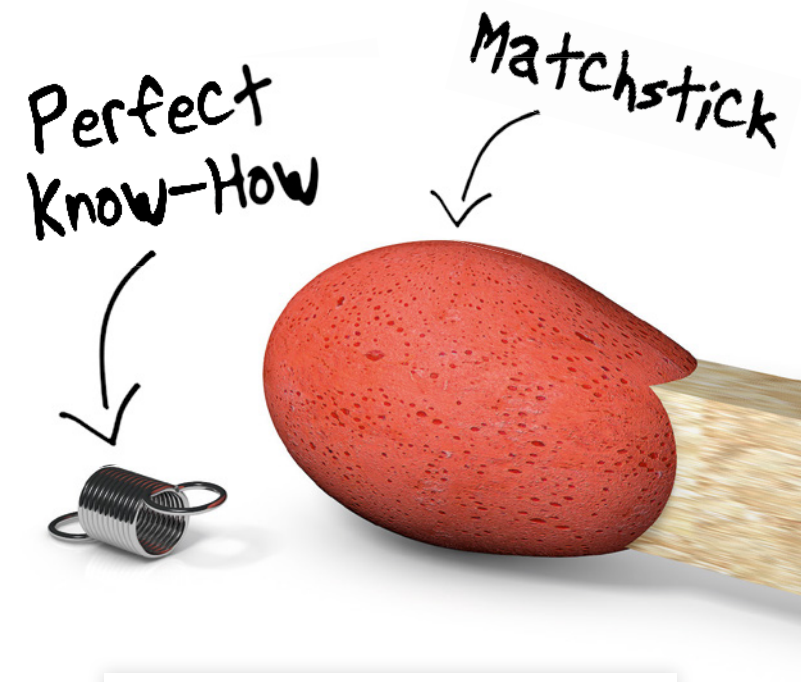

60 years of company history

A gap in the market with potential – Kurt Meder spotted an opportunity in 1954 and dared to take a major step with the series production of small precision springs of the highest quality.

While he made his first springs at his parents' house 60 years ago, MEDER now has 174 employees and 250 CNC spring coiling machines, producing ten million springs every day. The company's success is confirmed by an annual turnover of over 20 million euros.

Our expertise comes in many shapes and sizes. From compression springs, tension springs and torsion springs to wire and stamped-bent parts, MEDER springs are produced with the greatest precision and provide for a wide variety of products their actual mechanical function.

Our tiny champions are not only at home in the automotive industry, precision mechanics and electrical engineering. They are also indispensable in consumer goods and medical equipment.
